EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Maurice Pirio, Attorney Registration Number 33273 on December 2nd, 2008.

The application has been amended as follows:

Please cancel claim 15.

Please amend claim 11 as:

11. In a network communications environment comprising at least a first and a second server client, a client, and a client-to-home-server assignment data structure specifying assignments of the clients to a server to which clients can subscribe, a method for changing the distribution of traffic among the servers, the method comprising:

receiving at the first server a registration request from the client, wherein the registration request comprises a Session Initiation Protocol Register message;
determining at the first server a server with which the client is assigned to work based on the client-to-home-server assignment data structure;

Art Unit: 2451

when the determined server is the first server, processing the registration request at the first server;

when the determined sever is the second server, checking a number of Via

headers in the registration request, the number of Via headers indicating

how many times the registration request has been forwarded; and

if the number of Via headers is one, then sending a request from the first server to the

client redirecting the client to work with the second server;

else if the number of Via headers is greater than one, then proxying from the first server

the client's registration request to the second server so that the second server

processes the registration request;

setting up a subscription by a watcher to a current server;

monitoring the distribution of traffic among the servers;

determining that a change in the distribution of traffic could be beneficial;

modifying the client-to-home-server assignment data structure to reflect a change in

assignment of the client from the current server to a new server; and

sending a notification to the watcher of the change in assignment so that the watcher

can set up a new subscription.

Please amend claim 20 as:

Art Unit: 2451

20. A computer-readable storage medium containing computer-executable instructions for performing a method for a first server to redirect traffic, the method comprising:

receiving a registration request from a client, wherein the registration request comprises a Session Initiation Protocol Register message;

determining a server with which the client is assigned to work;

when the determined server is the first server, processing the registration request at the first server; and

when the determined sever is a second server, checking a number of Via headers in the registration request; and

if the number of Via headers is one, then sending a request to the client, redirecting the client to work with the second server;

else if the number of Via headers is greater than one, then proxying the client's registration request to the second server.

Please amend claim 33 as:

33. In a network communications environment, a system for redirecting traffic among servers, the system comprising:

a home server directory service;

Art Unit: 2451

a client configured for requesting an identification of a home server from the home server directory service, for receiving a home server identification in response, and for sending a registration request to the identified home server, the registration request including a number indicating how many times the registration request has been forwarded, wherein the registration request comprises a Session Initiation Protocol Register message;

the identified home server comprising a client-to-home-server assignment data structure, the identified home server configured for receiving the registration request from the client, for querying the client-to-home-server assignment data structure to determine a home server with which the client is assigned to work, for processing the registration request at the home server when the determined server is the home server, and for checking the number when the determined server is not the home server, and the home server with which the client is assigned to work

wherein if the number is one, the identified home server is configured to send a request to the client redirecting the client to work with the home server with which the client is assigned to work, and else if the number is greater than one, the identified home server is configured for proxying the client's registration request to the home server with which the client is assigned to work.

Please amend claim 34 as:

Art Unit: 2451

34. In a network communications environment, a system for redirecting traffic among servers, the system comprising:

a home server directory service;

a client configured for requesting an identification of a home server from the home server directory service, for receiving a home server identification in response, and for sending a registration request to the identified home server, wherein the registration request comprises a Session Initiation Protocol Register message;

the identified home server comprising a client-to-home-server assignment data structure, the identified home server configured for receiving the registration request from the client, for querying the client-to-home-server assignment data structure to determine a home server with which the client is assigned to work, for checking a number of Via headers in the registration request, and, if the number of Via headers is one, for sending a request to the client redirecting the client to work with the home server with which the client is assigned to work, else if the number of Via headers is greater than one, for proxying the client's registration request to the home server with which the client is assigned to work; and the home server with which the client is assigned to work.

REASON FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach neither singly nor in combination, the claimed limitation of the

Art Unit: 2451

use of “receiving a registration request from a client, wherein the registration request comprises a Session Initiation Protocol Register message; determining a server with which the client is assigned to work; when the determined server is the first server, processing the registration request at the first server; and when the determined sever is a second server, checking a number of Via headers in the registration request; and if the number of Via headers is one, then sending a request to the client, redirecting the client to work with the second server; else if the number of Via headers is greater than one, then proxying the client's registration request to the second server” as stated in claims 11, 20, 33, and 34. This limitation, in conjunction with other limitation in the independent claims, is not specifically disclosed or remotely suggested in the prior art or record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
